Policy Statement

Optum* by OptumHealth Care Solutions, LLC considers manual therapy medically necessary when all of the following conditions are met:

- Benefit coverage criteria are satisfied
- The patient has a health condition/disorder for which manual therapy techniques are clinically appropriate and not contraindicated
- Skilled care services are warranted

AND

- Manual therapy techniques are reported as a stand-alone procedure; or
- Are supported as the most comprehensive service performed; or
- Manual therapy techniques are performed to a separate and distinct anatomical region, when any chiropractic manipulative treatment (CMT) procedural code is also recorded; and
- All documentation requirements are met

Purpose

This policy has been developed to describe the criteria that Optum uses to conduct utilization review (UR) for services described as manual therapy including joint manipulation.

*Optum is a brand used by OptumHealth Care Solutions, LLC and its affiliates
**Scope**

All in and out of network programs involving all provider types, where utilization review determinations are rendered. This policy also serves as a resource for peer-to-peer interactions in describing the position of Optum on the reporting manual therapy services.

**Definition**

**Manual Therapy:** A clinical approach utilizing skilled, specific hands-on techniques, including but not limited to manipulation/mobilization, used by the clinician to diagnose and treat soft tissues and joint structures for the purpose of modulating pain; increasing range of motion (ROM); reducing or eliminating soft tissue inflammation; inducing relaxation; improving contractile and non-contractile tissue repair, extensibility, and/or stability; facilitating movement; and improving function. *Adapted from the American Academy of Orthopedic Manual Physical Therapy (AAOMPT) and American Physical Therapy Association (APTA).*

**Background**

**Overview**

Manual therapy is a clinical approach utilizing skilled, specific active and/or passive hands-on techniques, in order to diagnose and treat soft tissues and joint structures in the trunk, neck, and extremities. The aims of manual therapy include modulating pain; increasing range of motion (ROM); reducing or eliminating soft tissue inflammation; inducing relaxation; improving contractile and non-contractile tissue repair, extensibility, and/or stability; facilitating movement; and improving function. Manual therapy techniques include but are not limited to: soft tissue mobilization, joint mobilization and manipulation, manual lymphatic drainage, manual traction, craniosacral therapy, myofascial release, and neural gliding techniques.

**Types of MTT**

A number of manual therapies have evolved over the years that encompass a diverse set of techniques commonly performed by chiropractors, physical therapists, and other health care professionals. The different approaches can be broadly classified by the anatomic target ie, soft-tissue or joint. Table 1 lists the most commonly reported manual therapy techniques.

Application of Manual Therapy Techniques

While the decision on which technique to use is based on the clinician’s belief, their level of expertise, their decision-making processes, and practice scope; there is general agreement on those criteria that are important for the correct application of a manual therapy. These include: specificity of the procedure; direction and amount of force; the duration, type, and irritability of symptoms; and patient and clinician position.

Indications and Contraindications for Manual Therapy Techniques

Indications:
Broadly, manual therapy is indicated when there is mechanically induced musculoskeletal pain ie, pain that is provoked and relieved by specific motions or positions. There may be specific indications for different types of manual therapy techniques.

Contraindications:
As with indications, the contraindications to manual therapy listed below are broadly applicable to the different techniques. There may be modifications to or additional contraindications associated with specific manual techniques eg, thrust joint manipulation.

- **Absolute**
  - Bacterial infection
  - Malignancy
  - Systemic localized infection
  - Sutures over the area
  - Recent fracture
  - Cellulitis
  - Febrile state
  - Hematoma
  - Acute circulatory condition
  - An open wound at the treatment site
  - Osteomyelitis
  - Advanced diabetes

*Optum is a brand used by OptumHealth Care Solutions, LLC and its affiliates*
Utilization Management Policy

- Hypersensitivity of the skin
- Inappropriate end feel (spasm, empty, bony)
- Constant, severe pain, including pain which disturbs sleep, indicating that the condition is likely to be in the acute stage of healing
- Extensive radiation of pain
- Pain unrelieved by rest

- Relative
  - Joint effusion or inflammation
  - Rheumatoid arthritis
  - Presence of neurological signs
  - Osteoporosis
  - Hypermobility
  - Pregnancy
  - Dizziness

Reporting Manual Therapy Services

CPT Coding:
The Current Procedural Terminology (CPT) manual instructs users to, “Select the name of the procedure or service that accurately identifies the service performed. Do not select a CPT code that merely approximates the service provided.”

Physical and occupational therapists typically report CPT code 97140 for services best described as manual therapy techniques. CPT has established specific procedural codes that are intended to describe manual treatment when performed by chiropractors. Chiropractic manipulative treatment (CMT) has been defined by CPT as, “...a form of manual treatment to influence joint and neurophysiologic function. This treatment may be accomplished using a variety of techniques.” A series of three CMT codes (98940, 98941, 98942) describes the number of spinal regions receiving manipulation. A single extraspinal CMT code (98943) is used by chiropractors to describe manual therapy (e.g., manipulative treatment) directed at the head, extremities, rib cage, and abdomen. CPT code 97140 (manual therapy techniques) may be billed (with the appropriate modifier) on the same date of service as a spinal CMT code, when the manual therapy service is provided to a different noncontiguous body region than the CMT.

Documentation Requirements:
The following criteria must be documented to support the clinical necessity of manual therapy services:

- The clinical indication and appropriateness of the selected MTT including the need for skilled care services for treating a musculoskeletal condition
- The clinical rationale for a separate and identifiable service must be documented when both CPT code 97140 and a CMT procedural code are reported on the same date
- Description of the manual therapy technique e.g., joint manipulation, myofascial release, mobilization, etc.
- Location e.g., spinal region(s), shoulder, thigh, etc.
- Time (This applies only to CPT code 97140, which includes a timed-therapy services requirement)
Utilization Management Policy

There are general coverage criteria, which must be met when conducting utilization review determinations, in addition to those documentation requirements (above) associated with the different types of manual therapies. These criteria are found in the member's Summary Plan Description (SPD) or Certificate of Coverage (COC), and health plan medical policies to determine whether coverage is provided, if there are any exclusions or benefit limitations applicable to this policy.

Coding Information

Note: The Current Procedural Terminology (CPT) codes listed in this policy may not be all inclusive and are for reference purposes only. The listing of a service code in this policy does not imply that the service described by the code is a covered or non-covered health service. Coverage is determined by the member’s benefit document.
