Established Patient Re-evaluation

Policy Statement

Optum* by OptumHealth Care Solutions, LLC considers the reporting of established patient re-evaluation services to be appropriate and/or medically necessary when all of the following conditions are met:

- Benefit coverage criteria are satisfied
- Re-evaluation is not a recurring routine assessment of patient status
- The documentation of the re-evaluation includes all of the following elements:
  - An evaluation of progress toward current goals;
  - Making a professional judgment about continued care;
  - Making a professional judgment about revising goals and/or treatment or terminating services.

And any one of the following indications is documented:

- The patient presents with new clinical findings;
- There is a significant change in the patient's condition;
- The patient has failed to respond to the therapeutic interventions outlined in the current plan of care.

Purpose

This policy has been developed to describe the criteria that Optum uses to conduct utilization review (UR) determinations concerning the appropriateness and/or medical necessity for reporting of established patient re-evaluations.
Utilization Management Policy

Key Policy Question

What are the circumstances that support the addition of a separate and distinct re-evaluation during the course of care for an established patient?

Scope

In-scope: All in and out of network programs (exclusive of Medicare and Medicaid products for chiropractic) involving all provider types, where utilization review determinations about evaluation and management (E/M) services and/or procedural codes 97164 and 97168 are reported. This policy also serves as a resource for peer-to-peer interactions in describing the position of Optum on the application of CPT codes 97164, 97168, 99211, 99212, 99213, 99214, 99215.

Out-of-scope: Determinations concerning the level or documented performance of evaluation and management (E/M) services.

Definitions

The following definitions apply to this policy:

Assessment

Assessment refers to the professional skills used to gather data by observation, patient inquiry, and may include limited objective testing and measurement to make clinical judgments regarding the patient's condition(s). Assessments determine changes in the patient's status since the last visit/treatment day and whether the planned procedure or service should be modified. Based on these assessment data, the clinician may make judgments about progress toward goals and/or determine that a more complete evaluation or re-evaluation (see ‘Reporting Re-evaluations’ below) is indicated.¹

Episode of care

The consultation and skilled care provided by a clinician...

- for a new health problem or condition, which begins with the initial evaluation and ends with the reporting of discharge status; or
- for a previously treated health problem or condition, which is preceded by at least 3 months without treatment; or
- for a previously treated health problem or condition, which is preceded by a separation from care due to a surgical procedure directly related to the health problem or condition; or
- for a chronic/recurrent health problem or condition, which consists of a series of treatment intervals marked by one or more brief separations from care.

An episode may include the evaluation and treatment related to multiple conditions.

<thead>
<tr>
<th><strong>Established patient</strong>&lt;br&gt;<strong>(chiropractor)</strong></th>
<th>An established patient is one who has received professional services from the physician [including chiropractor] or from another physician of the same specialty who belongs to the same group practice, during the past three years.2</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Established patient</strong>&lt;br&gt;<strong>(physical/occupational therapist)</strong></td>
<td>An established patient is one who has received professional services for an episode of care from the therapist or from another therapist of the same specialty, who belongs to the same group practice, for a particular condition. If a new problem/abnormality is encountered, then an initial evaluation should be reported.3</td>
</tr>
<tr>
<td><strong>Patient-important outcomes</strong></td>
<td>Reports or measures representing what is most important to patients about a condition and its treatment. Patient-important outcomes often relate to symptoms, signs, functional status, perceptions, or other aspects such as convenience and tolerability.4</td>
</tr>
<tr>
<td><strong>Re-evaluation</strong></td>
<td>The re-evaluation provides additional objective information not included in other documentation (eg, assessments of progress between visits). Re-evaluation is separately reportable and is periodically indicated during an episode of care when the professional assessment of a clinician indicates a significant improvement, or decline, or change in the patient's condition or functional status that was not anticipated in the plan of care.1</td>
</tr>
</tbody>
</table>

### Background

**Introduction**

“Reassessments [and re-evaluations] are an integral component of case management and should be made following an appropriate period of care…A knowledge of the natural history of the condition greatly facilitates decisions concerning the timing of reassessment.”5 The requirements for reporting patient re-evaluations have been described.2,6-8 Similarly, the documentation standards for substantiating the performance of established patient re-evaluations have been described.9,10 The routine assessment of patient progress (eg, to assess changes in a patient's status since the last visit, and whether the planned procedure or service should be modified) is included in the services provided during a subsequent office visit and is not reportable as a re-evaluation.1

**Indications for Reporting Re-evaluations**

In contrast to assessment, a re-evaluation is focused on evaluation of progress toward current goals and making a professional judgment about continued care, modifying goals and/or treatment or terminating services. Re-evaluation requires the same professional skills as an initial evaluation. Indications for a re-evaluation include new clinical findings, a significant change in the patient's condition, or failure to respond to the therapeutic interventions outlined in the plan of care.7

Reporting Re-evaluations

The reporting of a re-evaluation includes all of the following components:

- **Data collection:**
  - Updated relevant history
  - Current subjective symptoms
  - Pertinent physical examination findings
  - Standardized patient-important outcome assessments (e.g., measures of functional status) based on appropriate, relevant, and validated tests and tools using comparable and consistent methods

- **Outcomes assessment:**
  - Deciphering effectiveness of intervention(s)
    - Assessment or clinically meaningful progress in primary and secondary outcomes
    - Correlation of outcomes with anticipated goals
  - Identification of barriers to improvement/recovery

- **Clinical decision-making:**
  - Interpretation of symptoms and exam findings to determine the priority/focus of treatment
  - Judgments about the necessity of continued skilled care services
  - Identification of appropriate further intervention(s)

- **Plan of care:**
  - Updated person-centered goals that are consistent with changes in a patient’s condition and the likelihood of further clinically relevant improvement with treatment
  - Any modification of current intervention(s)
  - Description and implementation plan for any appropriate new intervention(s)
  - Frequency and duration of skilled- and self-care
  - Timeframe for re-evaluation of response to treatment and to determine the need for a change in the current plan of care
**Coding Information**

Note: The Current Procedural Terminology (CPT) codes listed in this policy may not be all inclusive and are for reference purposes only. The listing of a service code in this policy does not imply that the service described by the code is a covered or non-covered health service. Coverage is determined by the member’s benefit document.

<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
</table>
| 97164 | Re-evaluation of physical therapy established plan of care, requiring these components:  
- An examination including a review of history and use of standardized tests and measures is required; and  
- Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome.  
Typically, 20 minutes are spent face-to-face with the patient and/or family. |
| 97168 | 97168 - Re-evaluation of occupational therapy established plan of care, requiring these components:  
- An assessment of changes in patient functional or medical status with revised plan of care;  
- An update to the initial occupational profile to reflect changes in condition or environment that affect future interventions and/or goals; and  
- A revised plan of care. A formal reevaluation is performed when there is a documented change in functional status or a significant change to the plan of care is required.  
Typically, 30 minutes are spent face-to-face with the patient and/or family. |
| 99211 | Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician.  
Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services. |
| 99212 | Office or other outpatient visit for the evaluation and management of an established patient, which requires at least two of these three key components:  
- a problem focused history  
- a problem focused examination  
- straightforward medical decision making  
Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs  
Usually the presenting problem(s) are self-limited or minor. Physicians typically spend 10 minutes face-to-face with the patient and/or family. |
| 99213 | Office or other outpatient visit for the evaluation and management of an established patient, which requires at least two of these three key components:  
- an expanded problem focused history  
- an expanded problem focused examination  
- medical decision making of low complexity  
Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs  
Usually the presenting problem(s) are of low to moderate severity. Physicians typically spend 15 minutes face-to-face with the patient and/or family. |
| 99214 | Office or other outpatient visit for the evaluation and management of an established patient, which requires at least two of these three key components:  
- a detailed history  
- a detailed examination  
- medical decision making of moderate complexity  
Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs  
Usually the presenting problem(s) are of moderate to high severity. Physicians typically spend 25 minutes face-to-face with the patient and/or family. |
| 99215 | Office or other outpatient visit for the evaluation and management of an established patient, which requires at least two of these three key components:  
- a comprehensive history  
- a comprehensive examination  
- medical decision making of high complexity  
Counseling and/or coordination of care with other providers or agencies are provided consistent with the nature of the problem(s) and the patient’s and/or family’s needs  
Usually the presenting problem(s) are of moderate to high severity. Physicians typically spend 40 minutes face-to-face with the patient and/or family. |
